## HYDRAULIC TEST RIGS

Test rigs are complex and capable machines to accurately test, measure and certify your tooling and equipment.

They are vital to the continued operation of your company. They help to find faults before they develop into failures - protecting your equipment, but also your workforce and legal standing.

Investing in your own hydraulics test equipment puts you in control of your process quality and accreditation. It can also significantly reduce the cost of outsourced hire and testing.

## HIGH TEMPERATURE TEST RIG

- Hydraulic power unit with motor, heater, cooling, filtration and test chamber
- Capable of 150 l/min at 250 bar, at an oil temperature of 120C
- Digital readout and external test connections for remote readings

## AIR & NITROGEN LEAK TEST RIG

- Hydraulically moving test platform to submerge subjects in oil
- Able to test with either air or nitrogen at 24 bar
- Hydraulic power unit with a dual circuit for cleaning and circulating oil

## INDUSTRY LEADING HYDRAULICS EXPERTISE

- Denley brings more than 50 years experience to your hydraulics projects
- Bespoke hydraulic design, engineering, build, test and installation
- We work with you from modelling to manufacture and beyond
